

Home Problems Discovered In Tucson Mountain Sanctuary

I lived in a [Lennar home](#) in [Tucson Mountain Sanctuary](#) from 2006 to 2016. The beautiful community of several hundred tract homes is built around the junction of W Bopp Road and S Kinney Road in Pima County (Zip Code: 85735), southwest of the City of Tucson. The community was constructed in 2004.

I discovered a number of problems with the home and had to fix them during the course of the decade that I lived there. This is what I found:

- Electrification of home foundation and tiled floor that the [Tucson Electric Power \(TEP\)](#) utility company refused to diagnose and fix on their neutral system. The solution was to remove the Ufer concrete foundation electrical ground and to install an electrical ground system of less than 25 ohms as required by the National Electric Code (NEC) away from the home foundation. I noticed that abnormal toenail growth that had occurred in this home returned to normal after installing this.
- Energy Star electronic compact florescent lights (CFL) installed throughout the home giving off a harsh industrial light during the evenings and creating dirty electricity. Removed them and installed standard filament light bulbs.
- Microwave emitting security alarm device installed in living room and filling it with unnatural radiation. Removed and replaced with a standard passive infrared (PIR) sensor.
- Wi-Fi router installed at head level next to the computer that was causing dizziness to occur. Removed the Wi-Fi router and used the hardwired internet instead.
- Radio frequency (RF) transmitting Smart/AMR/AMI utility meters installed on the home and these are known for their toxicity to the human. Contacted the utility companies and neighbors to have them removed.
- Induction loop wiring errors in the living room and master bedroom creating high magnetic fields and disturbing mental functioning. Fixed switched socket wiring errors.
- Open drain sickness that occurs when drain traps dry out and a faulty kitchen island vent valve that allow sewer gas to fill the home. Replaced faulty sewer kitchen island vent valve and poured a quart of water down each drain in the home weekly.
- Radio frequency (RF) radiation field throughout home from satellites, cell phone towers, neighbors wireless products, wireless Smart/AMR/AMI utility meters, and so on. Adopted radio frequency radiation resistance health techniques. This problem is throughout the USA.
- Toxic radio frequency (RF) transmitter identified on west antenna tower. Complained to the Federal Communications Commission (FCC) and it was secretly removed. Stressed and dying plants in the back garden started growing normally afterward.
- Large tree next to bedroom was identified as disturbing sleep. The large tree was pruned away from the room and significantly shortened to reduce its impact on the electromagnetic environment of the bedroom to fix the problem.
- Stale recycled air. Installed fresh air vents and slightly opened windows on the opposite side of the home to create a cross flow of outdoor air to rectify this.

environmentalradiation.com

- Insufficient daylight in the kitchen. Installed extra windows in the kitchen.
- Insufficient sound levels inside the home. Opened all the windows as frequently as possible and placed a radio playing the classical radio station in the center of the home with the volume loud enough that it could be heard throughout the home.

I have now sold the home and I am pleased to report that I had identified these problems with the home and rectified them for the new home owners. It is possible that some of the other homeowners in the community may be having similar problems in their homes, as the homes were constructed around the same time. If you are living in one of these homes and are seeing health problems I would recommend that you hire a building biologist to troubleshoot the home. I recommend this company:
