

Top Electrical, Electronics & Wireless Problems

It is clear today that both the utilities and USA government are willfully damaging their mass populations with known biologically harmful electromagnetic radiation emissions into the human environment:

1. The use of radiation transmitting Smart/AMR/AMI utility meters that are known to be biologically harmful to a subset of the population. The installation of these onto peoples homes and workplaces are making many people sick today. This sickness is clearly preventable by the simple removal of the meters from the area around the persons home and workplace. Given that the utilities know that they are damaging peoples health with these radiation transmitting meters, they are clearly engaging in negligence and most likely gross criminal negligence. The utilities are willfully inducing Radio Wave Sickness and Electromagnetic Hypersensitivity into many people. The gas utility installed AMR/AMI meters throughout my neighborhood and refused to remove them even though they knew that they were making me sick with the pulsed radiation emissions that were throughout my home. I had to abandon my bed in 2013 and was sleeping on the floor to reduce the biological damaging effects from these radiation emitting devices. A search on the keywords "Smart Meter Sickness" yields many results of people reporting health problems from these known biologically toxic radiation transmitting meters.
2. The electrification of peoples homes and workplaces through stray voltage. Stray voltage is known to do strange things to biological organisms at above 0.5 volt. The higher the voltage, the more damage it does to the biological organism. It has been known for its damaging effects to diary farmers, their families and their animals since at least the 1970's. Stray voltage is prevalent in the human environment. Unfortunately, the voltage is low enough not to be sensed by the human but high enough to make the human sick. I have found extensive stray voltage in my street and my tiled floors are electrified, as are my drains. This also includes the toilets that I urinate into. The State of Arizona & the electrical utility refuse to acknowledge the problem and will not fix it, even though the voltage originates at the utility power equipment. They also refuse to witness and repeat my measurements. This appeared to show up in me as sore knees, irritability and fatigue. It is seasonal and matches the peak in stray voltage that appears in homes and workplaces throughout Tucson in the summertime air conditioning season. I eventually had to install an enhanced electrical ground. This caused the health symptoms to subside. In the area of the utility equipment, my garden was showing extensive stress and had done so for years. The garden recovered after installing the enhanced electrical ground.
3. Many biologically harmful electrical, electronic and wireless products are being routinely sold to the masses. The masses appear to be unaware that many of these products are biologically harmful. The most harmful devices appear to be wireless products. Indeed, the most biologically harmful product I found at my property was a simple wireless outdoor temperature and humidity sensor. It was extensively deforming the plants both inside and outside of my home! My digital TV was also showing similar issues. These products are not tested on plants and animals before being released into the marketplace. Purchasing electrical, electronic, and wireless products is like engaging in a game of Russian Roulette. Not everyone ends up with the biologically toxic products, but those who do generally become sick and that sickness is easily preventable by identifying and removing the toxic product from the persons environment.
4. It has now emerged that some of the "Energy Star" lighting products are bio-hazards. Compact

- fluorescent lights (CFL) are emitting man-made ultraviolet light which is known to cause skin and eye problems. Light emitting diode (LED) lights can have too much blue light in them which causes insomnia and can be too intense which may lead to eye problems. Both types of lights may emit strange electromagnetic fields and cause dirty electricity to occur on the home and workplace electrical wiring which may make the people who use them sick. There is ample evidence today that many of these “Energy Star” electronic lighting products should be banned.
5. People are now reporting curing Autism with electromagnetically shielding the child's bedroom. This is consistent with Autism being an electromagnetic disease and may indeed be easily preventable. The Autism rates have been closely following the rise in cell phone towers and cell phones in the USA for more than a decade.
 6. The refusal by the USA government to acknowledge these problems and to protect their own population. Instead, the USA government is demonstrating what can only be called a form of cannibalism towards its own population. It is supporting the installation of Smart/AMR/AMI meters with massive subsidies to the utilities. It is refusing to enforce the right to life laws when people report sickness around these radiation transmitting devices, leaving many people with sickness that is being induced into them by the simple action of living in their own homes that represent their greatest financial investment. This sickness should be expected to eventually lead to premature death and possibly cancer. It removes the quality of life from a previously healthy and functional person, leaving them with numerous health conditions that were not present before the installation of the biologically harmful radiation transmitting devices in their area. Indeed the World Health Organization lists wireless radiation as a “Possible Carcinogen”. One can only wonder why the utilities are installing known “Possibly Carcinogenic” meters onto people's homes in the USA? Long before cancer shows up, the person will generally display the symptoms of Radio Wave Sickness which are listed as: Top reported Radio Wave Sickness symptoms in order of frequency: 1. Fatigue. 2. Sleep disturbance. 3. Headaches. 4. Feeling of discomfort. 5. Difficulty in concentrating. 6. Depression. 7. Memory loss. 8. Visual disruptions. 9. Irritability. 10. Hearing disruptions. 11. Skin problems. 12. Cardiovascular. 13. Dizziness. 14. Loss of appetite. 15. Movement difficulties 16. Nausea. Source: Symptoms experienced by people in the vicinity of a cellular phone base station, Santini 2001, La Presse Medical.
 7. I have tried to obtain the number of whistle-blower complaints made to OSHA each year and the number of whistle-blower complaints that they actually uphold. OSHA has refused to supply this information. My independent research is indicating that it is below 5% and may actually be very close to 0% of whistle-blower complaints being upheld. It appears to be a similar story at the Federal Communications Commission (FCC) who are supposed to regulate electromagnetic radiation (EMR). It seems that the people who are aware of these gross human health and safety violations have simply had their rights quietly removed by corporate America in an attempt to prevent the protection of the masses, which is currently “Inconvenient”.
 8. Biological defects also occur when you reduce the radiation levels. Plants grown in electromagnetically screened Faraday cages show strange growth patterns and eventually die. It is unfortunate that people are now electromagnetically shielding their homes in an effort to avoid biologically harmful radiation exposures. Even pregnant mothers are electromagnetically shielding their unborn babies with a product called “Belly Armor”! This action may eventually make them sick from radiation deficiency diseases, similar to what astronauts show that live on the International Space Station for many months. The modern human is in a dilemma: to get sick from living in an unnaturally high radiation environment, or to get sick from a radiation deficient environment. Either way, many humans will eventually get sick!

Environmental Radiation LLC was founded in response to the increasing unregulated environmental pollution that is now occurring in the world. Terms such as “Smart Meter Sickness”, “Microwave Radiation Sickness”, “Electromagnetic Hypersensitivity”, and “Electronic Harassment” are now in common use in response to the unnatural environments that we are all living in. Not feeling well? Relationship problems? Children not developing correctly? Poor performing employees? These symptoms may be easily preventable.

“We are all modern day explorers of an invisible alien world.”

Steven Magee CEng MIET BEng Hons - Author of Toxic Electricity
