Stressed Trees of Santa Fe

Steven Magee, Chartered Electrical Engineer, took a trip to Santa Fe, New Mexico, USA in June 2016 and noticed that there were a lot of stressed trees in the town. He studies radio frequency biological deformities and knew that certain plants and trees can show stress when in unnatural man-made radio frequency (RF) fields. We take a look at what he saw on his trip:

This huge antenna tower dominates the skyline and is just a few blocks from the main plaza. As can be seen, Santa Fe's streets are filled with trees.
This tree was on the hill above the plaza. Note how part of the tree canopy appears diseased and has no leaves. Copious amounts of stressed trees like this could be seen within a mile of the central antenna tower.
The resort where I was staying also had many stressed trees throughout it.
Tree tops with significant leaf losses in their canopies.
Near to the central plaza below the tower, the street was filled with stressed trees.
The street was lined with stressed trees that look like these.
It was surprising to see so many stressed trees near to the Santa Fe main plaza.

This is just a small sample of what I saw in Santa Fe. What is going on that is causing the stresses in so many different trees around the main plaza area?
