Tucson Mountain Sanctuary Radio Frequency (RF) Mystery

History

Tucson Mountain Sanctuary is a beautiful community that is near to the Tucson Mountains and has picturesque views of the mountain range. It was built around 2004. However, the community is next to three tall antenna towers with multiple industrial radio frequency (RF) transmitter systems. Steven Magee purchased a home in this community in 2006 that was followed by a severe downward spiral into poor health. No one had warned him about the known biological toxicity of radio frequency transmitter systems and he was oblivious for the need to live away from industrial radio frequency transmitter systems for the purpose of good health. It is known that the sickness rates in people generally start spiking up in populations that live within a quarter of a mile of a cell phone tower. Radio Wave Sickness is well categorized today and the top reported Radio Wave Sickness symptoms in order of frequency are: Fatigue, sleep disturbance, headaches, feeling of discomfort, difficulty in concentrating, depression, memory loss, visual disruptions, irritability, hearing disruptions, skin problems, cardiovascular, dizziness, loss of appetite, movement difficulties and nausea. (Source: Symptoms experienced by people in the vicinity of a cellular phone base station, Santini 2001, La Presse Medical.)

The community also has radio frequency transmitting utility meters installed into it on the gas and electric meters and is scheduled to have radio frequency transmitting water meters installed in the future. There are currently two radio frequency meters per property and it will eventually be three radio frequency meters per property. These are known for their biological toxicity to the human.

Steven Magee's degrading health conditions followed the classic symptoms of Radio Wave Sickness (RWS), with fatigue, buzzing ears and compromised mental functioning being the primary symptoms. This progressed into the more severe condition known as Electromagnetic Hypersensitivity (EHS) after the installation of the radio frequency transmitting Itron 100G gas meters into the community. The most severe reactions that Steven Magee has observed were in response to a sidewalk encounter with the car mounted transceiver radio frequency system that drives through the neighborhood every time the meters are read by the utility company. A week of severe sickness followed this biologically toxic encounter.

As Steven Magee's knowledge of the biologically harmful radio frequencies within the community continue to increase, he finds that the tall tree in front of the bedroom is filling the bedroom with biologically harmful electromagnetic radiation. Strange dreams and chronic fatigue occur when he sleeps in there. Cutting the tree down eliminates this. He finds that his electrical system is filled with a wide range of frequencies that are much higher than the utility system 60 Hertz frequency. Putting the electrical ground cable next to an AM radio tuned to static (no radio station) causes the radio to buzz, it is clear that the electrical grounding system is emitting radio frequencies! Plants are showing strange deformity and retardation throughout the home and garden. He finds that the sidewalk, garden and home foundation are electrified and are emitting a wide range of electromagnetic radiation frequencies!
Mystery Radio Frequency Transmitters

Steven Magee makes inquiries with the following organizations to establish what is going on in the Tucson Mountain Sanctuary community regarding radio frequency emissions:

- Pima County
- Federal Communications Commission (FCC)
- Tucson Mountain Sanctuary Home Owners Association
- AT&T
- Sprint
- T-Mobile

He requests information from the above organizations:

- The transmission tower permits x 3.
- The permits for each RF transmitter that have been installed on each tower.
- Frequency of transmission of each RF transmitter system.
- RF radiated power levels of each RF transmitter system.
- FCC ID of each RF transmitter system.
- The three RF towers are located about 2,000 to 2,300 feet from Steven Magee's home at:
  - 6240 W. Bopp Road, Tucson, AZ 85735
  - 4005 S. Sheridan Avenue, Tucson, AZ 85735
  - 3889 S. Sheridan Avenue, Tucson, AZ 85735
Steven Magee had submitted a complaint to the FCC and Health Canada regarding this transmitter tower and the lower of the two transmitting systems was removed following this, probably sometime in 2014. This transmitter system is a mystery as to what it was and why it was removed.

Pima County state that the radio frequency tower permit number is P11CP03122. However, they have yet to supply a copy of this permit for review. They have not replied to the RF questions.

The FCC have yet to supply any information regarding this transmission tower and its transmitters.

T-Mobile have yet to supply any information regarding this transmission tower and its transmitters.

The Tucson Mountain Sanctuary Home Owners Association have yet to supply the requested information regarding this transmission tower and its transmitters.
• Pima County state that the radio frequency tower permit number is P98RW02645. However, they have yet to supply a copy of this permit for review. They have not replied to the RF questions.
• The FCC have yet to supply any information regarding this transmission tower and its transmitters.
• Sprint have yet to supply any information regarding this transmission tower and its transmitters.
• The Tucson Mountain Sanctuary Home Owners Association have yet to supply the requested information regarding this transmission tower and its transmitters.
Pima County state that the radio frequency tower permit number is P07CP09087. However, they have yet to supply a copy of this permit for review. They have not replied to the RF questions.

The FCC have yet to supply any information regarding this transmission tower and its transmitters.

AT&T have yet to supply the requested information regarding this transmission tower and its transmitters.

The Tucson Mountain Sanctuary Home Owners Association have yet to supply the requested information regarding this transmission tower and its transmitters.
Mystery Radio Frequency Towers

As you can see, the radio frequency (RF) transmissions into the community from the RF towers continues to be a mystery. A large group of people are withholding this right to know information from the residents of Tucson Mountain Sanctuary. Why the mystery?

The biologically harmful radio frequency transmissions into the Tucson Mountain Sanctuary community were reported to both Pima County and to the Tucson Mountain Sanctuary Home Owners Association as known health and safety issues. To date, neither organization has replied with a plan of action to effectively address the radio frequency health and safety issues within the residential community that contains pregnant ladies, developing children and vulnerable babies.

The City of Tucson and the Federal Communications Commission have both been invited to Steven Magee's home to view the plant deformity and retardation effects. No one has shown up from either organization.

Interim Action

Steven Magee was able to characterize the condition of Radio Wave Sickness and Electromagnetic Hypersensitivity by performing many plant growth experiments that are available to view on the StevenMageeBooks YouTube Channel. By characterizing the biologically harmful effects on plants, he was able to develop radio frequency “Radiation Resistance” health techniques that he reports in the book Curing Electromagnetic Hypersensitivity. Steven Magee has gone into remission from Electromagnetic Hypersensitivity by using these health techniques. The radio frequency “Radiation Resistance” health techniques are comparable to those discovered by the radiation survivors in Japan after the dropping of the atomic bombs.
